Chapter 1

Macaroni Penguins

A freestanding C environment, dubbed "Macaroni OS", developed in a group project for Operating System Structures (CS450) at WVU in Fall 2025.

See the repo at <https://github.com/WVU-CS450/MacaroniPenguins>.

1.1 GETTING STARTED

Install WSL if you need to:

```
wsl --install -d ubuntu
```

It is recommended to use an Ubuntu WSL distro, as some things like the doxyfile.sh script only work in this specific environment, but it is not required.

Clone this repo into a linux environment (WSL, Ubuntu, etc):

```
git clone https://github.com/WVU-CS450/MacaroniPenguins.git
```

Prep your linux environment by running the following commands:

```
sudo apt update
sudo apt install -y clang make nasm git binutils-i686-linux-gnu qemu-system-x86 gdb
```

Then run `make` and `./mpx.sh`.

For more information, either run the `help` command (or `help verbose`) inside of MacaroniOS, or consult the [doc/USER-GUIDE.pdf](#).

1.2 CONTRIBUTING

After making changes to the code, running `version` will show that your working directory is 'dirty'. This simply means that you have uncommitted changes. Ensure you have checked out the correct branch and pulled its latest changes. Stage/add the relevant files before committing them.

Now you can run `make clean` and `make` again, run `./mpx.sh`, and finally run `version` to see your latest commit hash and showing that your working directory is 'clean'.

When you're done, add your contributions to [dev/CONTRIBUTIONS.docx](#) and save it as [doc/↩️ CONTRIBUTIONS.pdf](#).

1.3 DOXYGEN

Install doxygen and dependancies:

```
sudo apt update
sudo apt install -y doxygen texlive-full texlive-latex-base texlive-latex-extra wslu
```

If you get some errors, maybe try `sudo apt upgrade -y`. If you are getting an "WSL Interoperability is disabled" error, see [WSL issue 13449](#) and run the permanent fix codeblock.

Create the configuration file (convention is a Doxyfile) with `doxygen -g Doxyfile`. Edit the file to your liking, reference the [doxygen manual](#) if needed, then run this script:

```
./doxyfile.sh
```

When releasing a new version of MacaroniOS, remember to change the `PROJECT_NUMBER` (to R1, R2, etc) (this should also get changed in `user/version.c`).

This script runs doxygen to generate a bunch of latex files in the dev folder, makes those files into a pdf, renames the pdf and moves it to become the [doc/PROGRAMMER-GUIDE.pdf](#), and opens the pdf (opening it uses `wslview` which only works in a WSL environment).

1.4 RELEASES

View all of the [Releases](#) or view previous documentation in [doc/.legacy/](#).

Chapter 2

Data Structure Index

2.1 Data Structures

Here are the data structures with brief descriptions:

pcb	7
pcb_queue	8
rtc_date_t	8
rtc_time_t	9
stores	
Struct that stores data relating to the time , and Hours	9

Chapter 3

File Index

3.1 File List

Here is a list of all documented files with brief descriptions:

include/ block.h	11
include/ clock.h	
Handles accesses to the Real Time Clock (RTC)	11
include/ comhand.h	
Command handler interface for the OS. Reads from the polling input and executes commands	17
include/ ctype.h	
A subset of standard C library functions	19
include/ exit.h	
Header file for the exit command used in the command handler. Exits the terminal when called and confirmed by the user	20
include/ help.h	
Header for the help command used in command handler. Used to list the commands available to the user	21
include/ init.h	22
include/ itoa.h	
Declaration for interger-to-ASCII conversion	22
include/ itoBCD.h	
Function that converts an integer into a string that is representative of the binary coded decimal format of the input integer	23
include/ memory.h	
MPX-specific dynamic memory functions	24
include/ pcb.h	
Process Control Block queue and stack functions	36
include/ processes.h	
Provided system process and user processes for testing	41
include/ ready.h	
Commands to suspend or resume a process	43
include/ setPriority.h	46
include/ showPCB.h	
Provides ability to display a specific PCB, all PCBs, or PCBs in specific queues	46
include/ stdlib.h	
A subset of standard C library functions	49

include/string.h	
A subset of standard C library functions	50
include/sys_req.h	
System request function and constants	54
include/version.h	
Displays the current version of MacaroniOS	56
include/mpx/device.h	26
include/mpx/gdt.h	
Kernel functions to initialize the Global Descriptor Table	26
include/mpx/interrupts.h	
Kernel functions related to software and hardware interrupts	27
include/mpx/io.h	
Kernel macros to read and write I/O ports	29
include/mpx/panic.h	
Common system functions and definitions	31
include/mpx/serial.h	
Kernel functions and constants for handling serial I/O	32
include/mpx/vm.h	
Kernel functions for virtual memory and primitive allocation	34

Chapter 4

Data Structure Documentation

4.1 pcb Struct Reference

Collaboration diagram for pcb:

Data Fields

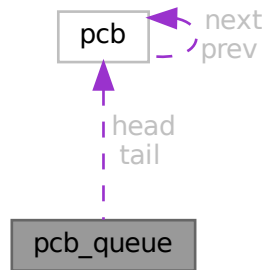

- char **name** [PCB_NAME_MAX_LEN]
- enum process_class **process_class**
- int **priority**
- enum execution_state **execution_state**
- enum dispatch_state **dispatch_state**
- char * **stack**
- char * **stack_ptr**
- struct [pcb](#) * **next**
- struct [pcb](#) * **prev**

The documentation for this struct was generated from the following file:

- include/[pcb.h](#)

4.2 pcb_queue Struct Reference

Collaboration diagram for `pcb_queue`:

Data Fields

- struct `pcb` * **head**
- struct `pcb` * **tail**

The documentation for this struct was generated from the following file:

- `include/pcb.h`

4.3 rtc_date_t Struct Reference

Data Fields

- `uint8_t` **day**
- `uint8_t` **month**
- `uint8_t` **year**

The documentation for this struct was generated from the following file:

- `include/clock.h`

4.4 `rtc_time_t` Struct Reference

Data Fields

- `uint8_t second`
- `uint8_t minute`
- `uint8_t hour`

The documentation for this struct was generated from the following file:

- `include/clock.h`

4.5 `stores` Struct Reference

Struct that stores data relating to the time , and Hours.

4.5.1 Detailed Description

Struct that stores data relating to the time , and Hours.

Struct that stores data relating to the date , and Year.

The documentation for this struct was generated from the following file:

- `include/clock.h`

Chapter 5

File Documentation

5.1 block.h

```
00001 #ifndef BLOCK_H
00002 #define BLOCK_H
00003
00004 #include <pcb.h>
00005 #include <sys_req.h>
00006 #include <string.h>
00007
00008
00009
00014 void block_pcb_command(const char* args);
00015
00016
00020 void block_help(void);
00021
00022
00027 void block_pcb(const char* name);
00028
00029
00034 void unblock_pcb_command(const char* args);
00035
00036
00040 void unblock_help(void);
00041
00042
00047 void unblock_pcb(const char* name);
00048
00049 #endif
```

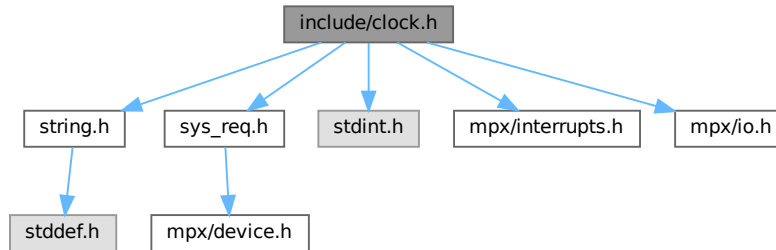

5.2 include/clock.h File Reference

Handles accesses to the Real Time Clock (RTC)

```
#include <string.h>
#include <sys_req.h>
#include <stdint.h>
#include <mpx/interrupts.h>
```

```
#include <mpx/io.h>
```

Include dependency graph for clock.h:

Data Structures

- struct [rtc_time_t](#)
- struct [rtc_date_t](#)

Functions

- void [get_time](#) ([rtc_time_t](#) *time)
Accesses the RTC and stores the current time into specified struct.
- void [set_time](#) (const [rtc_time_t](#) *time)
Stores the specified time into associated RTC registers.
- void [get_date](#) ([rtc_date_t](#) *date)
Accesses the RTC and stores the current date into specified struct.
- void [set_date](#) (const [rtc_date_t](#) *date)
Stores the specified date into associated RTC registers.
- void [print_time](#) ([rtc_time_t](#) *time)
Prints the specified time in the form HH:MM:SS.
- void [print_date](#) (const [rtc_date_t](#) *date)
Prints the specified date in the form MM/DD/YY.
- void [clock_help](#) (void)
Prints help information related to the clock command.
- void [clock_command](#) (const char *args)
Main handler for the clock command.
- void [my_strcat](#) (char *dest, const char *src)
Concatenates src to the end of dest.
- void [my_strcpy](#) (char *dest, const char *src)
Copies src to dest.
- void [rtc_write](#) (uint8_t reg, uint8_t value)
Writes data to an RTC register.
- uint8_t [rtc_read](#) (uint8_t reg)
Reads data from an RTC register.

- `uint8_t bin_to_bcd (uint8_t value)`
Converts an integer from binary to Binary Coded Decimal (BCD)
- `uint8_t bcd_to_bin (uint8_t value)`
Converts an integer from Binary Coded Decimal (BCD) to binary.
- `void tz_correction (void)`
Converts the standard RTC timezone (UTC) to EST.

5.2.1 Detailed Description

Handles accesses to the Real Time Clock (RTC)

5.2.2 Function Documentation

5.2.2.1 bcd_to_bin()

```
uint8_t bcd_to_bin (  
    uint8_t value )
```

Converts an integer from Binary Coded Decimal (BCD) to binary.

Parameters

<i>value</i>	The value to convert
--------------	----------------------

Returns

The specified value in binary

5.2.2.2 bin_to_bcd()

```
uint8_t bin_to_bcd (  
    uint8_t value )
```

Converts an integer from binary to Binary Coded Decimal (BCD)

Parameters

<i>value</i>	The value to convert
--------------	----------------------

Returns

The specified value as a BCD

5.2.2.3 clock_command()

```
void clock_command (
    const char * args )
```

Main handler for the clock command.

Parameters

<i>args</i>	The argument string passed after 'clock'
-------------	--

5.2.2.4 get_date()

```
void get_date (
    rtc_date_t * date )
```

Accesses the RTC and stores the current date into specified struct.

Parameters

<i>date</i>	Stores the current Day, Month, and Year
-------------	---

5.2.2.5 get_time()

```
void get_time (
    rtc_time_t * time )
```

Accesses the RTC and stores the current time into specified struct.

Parameters

<i>time</i>	Stores the current Seconds, Minutes, and Hours
-------------	--

5.2.2.6 my_strcat()

```
void my_strcat (
    char * dest,
    const char * src )
```

Concatenates src to the end of dest.

Parameters

<i>dest</i>	The argument string to be appended to
<i>src</i>	The argument string to append to

5.2.2.7 my_strcpy()

```
void my_strcpy (
    char * dest,
    const char * src )
```

Copies *src* to *dest*.

Parameters

<i>dest</i>	Stores a copy of <i>src</i>
<i>src</i>	Copied to <i>dest</i>

5.2.2.8 print_date()

```
void print_date (
    const rtc_date_t * date )
```

Prints the specified date in the form MM/DD/YY.

Parameters

<i>time</i>	Passes the Day, Month, and Year
-------------	---------------------------------

5.2.2.9 print_time()

```
void print_time (
    rtc_time_t * time )
```

Prints the specified time in the form HH:MM:SS.

Parameters

<i>time</i>	Passes the Seconds, Minutes, and Hours
-------------	--

5.2.2.10 rtc_read()

```
uint8_t rtc_read (
    uint8_t reg )
```

Reads data from an RTC register.

Parameters

<i>reg</i>	Address of specified RTC register
------------	-----------------------------------

5.2.2.11 rtc_write()

```
void rtc_write (
    uint8_t reg,
    uint8_t value )
```

Writes data to an RTC register.

Parameters

<i>reg</i>	Address of specified RTC register
<i>value</i>	The byte to write to the RTC register

5.2.2.12 set_date()

```
void set_date (
    const rtc_date_t * date )
```

Stores the specified date into associated RTC registers.

Parameters

<i>date</i>	Passes user defined Day, Month, and Year
-------------	--

5.2.2.13 set_time()

```
void set_time (
    const rtc_time_t * time )
```

Stores the specified time into associated RTC registers.

Parameters

<i>time</i>	Passes user defined Seconds, Minutes, and Hours
-------------	---

5.3 clock.h

[Go to the documentation of this file.](#)

```

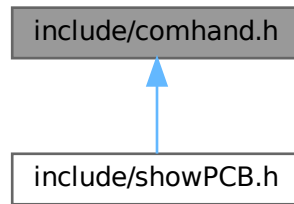

00001 #ifndef CLOCK_H
00002 #define CLOCK_H
00003
00004 #include <string.h>
00005 #include <sys_req.h>

00125
00129 void tz_correction(void);
00130
00131 #endif

```

5.4 include/comhand.h File Reference

Command handler interface for the OS. Reads from the polling input and executes commands.

This graph shows which files directly or indirectly include this file:

Functions

- void **com_startup** (void)
Prints a welcome message and penguin ASCII art to the terminal.
- void **trim_Input** (char *str)
Trim function to remove \n and \r from the string.
- void **comhand** (void)
Enters a loop and waits for the user to input commands.

5.4.1 Detailed Description

Command handler interface for the OS. Reads from the polling input and executes commands.

5.4.2 Function Documentation

5.4.2.1 trim_Input()

```
void trim_Input (  
    char * str )
```

Trim function to remove \n and \r from the string.

Parameters

<i>str</i>	string variable to trim
------------	-------------------------

5.5 comhand.h

[Go to the documentation of this file.](#)

```
00001 #ifndef COMHAND_H
00002 #define COMHAND_H
00003
00013 void com_startup(void);
00014
00019 void trim_Input(char *str);
00020
00024 void comhand(void);
00025
00026 #endif
```

5.6 include/ctype.h File Reference

A subset of standard C library functions.

Functions

- int [isspace](#) (int c)

5.6.1 Detailed Description

A subset of standard C library functions.

5.6.2 Function Documentation

5.6.2.1 isspace()

```
int isspace (
    int c )
```

Determine if a character is whitespace.

Parameters

<i>c</i>	Character to check
----------	--------------------

Returns

Non-zero if space, 0 if not space

5.7 ctype.h

[Go to the documentation of this file.](#)

```
00001 #ifndef MPX_CTYPE_H
00002 #define MPX_CTYPE_H
00003

5.8 include/exit.h File Reference

Header file for the exit command used in the command handler. Exits the terminal when called and confirmed by the user.

Functions

- void **exit_help** (void)
- int **exit_command** (const char *args)

Begins the shutdown process when the user types 'exit' in the terminal. Confirmation by typing 'Y' or 'n' is then required to completely exit.

5.8.1 Detailed Description

Header file for the exit command used in the command handler. Exits the terminal when called and confirmed by the user.

Author

Caleb Edwards

5.8.2 Function Documentation

5.8.2.1 exit_command()

```
int exit_command (
    const char * args )
```

Begins the shutdown process when the user types 'exit' in the terminal. Confirmation by typing 'Y' or 'n' is then required to completely exit.

Parameters

<i>arg_counter</i>	Counts the number of arguments input.
<i>arg_vector</i>	Stores the arguments.

Returns

int return 1 to confirm exit and 0 to return to terminal.

5.9 exit.h

[Go to the documentation of this file.](#)

```
00001 #ifndef EXIT_H
00002 #define EXIT_H
00010 void exit_help(void);
00011
00020 int exit_command(const char *args);
00021
00022 #endif
```

5.10 include/help.h File Reference

Header for the help command used in command handler. Used to list the commands available to the user.

Functions

- void **help_message** (void)
Prints all commands available into the terminal when the user types 'help' in the input.
- void **help_command** (const char *args)
Prints all commands individual help functions.
- void **help_verbose** (void)
Prints all commands individual help functions.

5.10.1 Detailed Description

Header for the help command used in command handler. Used to list the commands available to the user.

Author

Caleb Edwards

5.13 include/itoa.h File Reference

Declaration for interger-to-ASCII conversion.

This graph shows which files directly or indirectly include this file:

Functions

- void `itoa` (int num, char *buffer)
Converts an integer to a C-string.

5.13.1 Detailed Description

Declaration for interger-to-ASCII conversion.

5.13.2 Function Documentation

5.13.2.1 itoa()

```
void itoa (
    int num,
    char * buffer )
```

Converts an integer to a C-string.

Parameters

<i>num</i>	The integer to convert.
<i>buffer</i>	Pointer to an array to store the string.

5.14 itoa.h

[Go to the documentation of this file.](#)

```
00001 #ifndef ITOA_H

00017 #endif
```

5.15 include/itoBCD.h File Reference

Function that converts an integer into a string that is representative of the binary coded decimal format of the input integer.

Functions

- void [itoBCD](#) (int num, char *buffer)

5.15.1 Detailed Description

Function that converts an integer into a string that is representative of the binary coded decimal format of the input integer.

5.15.2 Function Documentation

5.15.2.1 itoBCD()

```
void itoBCD (
    int num,
    char * buffer )
```

Convert an integer to an Binary Coded Decimal

Parameters

<i>int</i>	Integer being converted into a Binary Coded Decimal
<i>s</i>	A buffer to hold the created string

5.16 itoBCD.h

[Go to the documentation of this file.](#)

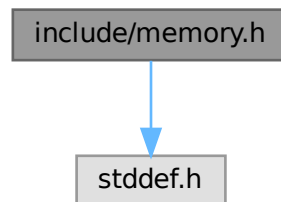

```
00001 #ifndef ITOBCD_H
00002 #define ITOBCD_H
00003
00017 void itoBCD(int num, char* buffer);
00018
00019 #endif
```

5.17 include/memory.h File Reference

MPX-specific dynamic memory functions.

```
#include <stddef.h>
```

Include dependency graph for memory.h:

Functions

- void * [sys_alloc_mem](#) (size_t size)
- int [sys_free_mem](#) (void *ptr)
- void [sys_set_heap_functions](#) (void *(*alloc_fn)(size_t), int(*free_fn)(void *))

5.17.1 Detailed Description

MPX-specific dynamic memory functions.

5.17.2 Function Documentation

5.17.2.1 sys_alloc_mem()

```
void * sys_alloc_mem (
    size_t size )
```

Allocate dynamic memory.

Parameters

<i>size</i>	The amount of memory, in bytes, to allocate
-------------	---

Returns

NULL on error, otherwise the address of the newly allocated memory

5.17.2.2 sys_free_mem()

```
int sys_free_mem (
    void * ptr )
```

Free dynamic memory.

Parameters

<i>ptr</i>	The address of dynamically allocated memory to free
------------	---

Returns

0 on success, non-zero on error

5.17.2.3 sys_set_heap_functions()

```
void sys_set_heap_functions (
    void (*)(size_t) alloc_fn,
    int (*)(void *) free_fn )
```

Installs user-supplied heap management functions.

Parameters

<i>alloc_fn</i>	A function that dynamically allocates memory
<i>free_fn</i>	A function that frees dynamically allocated memory

5.18 memory.h

[Go to the documentation of this file.](#)

```
00001 #ifndef MPX_MEMORY_H

00012 #endif
```

5.22 include/mpx/interrupts.h File Reference

Kernel functions related to software and hardware interrupts.

This graph shows which files directly or indirectly include this file:

Macros

- `#define cli() __asm__ volatile ("cli")`
- `#define sti() __asm__ volatile ("sti")`

Functions

- void `irq_init` (void)
- void `pic_init` (void)
- void `idt_init` (void)
- void `idt_install` (int vector, void(*handler)(void *))

5.22.1 Detailed Description

Kernel functions related to software and hardware interrupts.

5.22.2 Macro Definition Documentation

5.22.2.1 cli

```
#define cli( ) __asm__ volatile ("cli")
```

Disable interrupts

5.22.2.2 sti

```
#define sti( ) __asm__ volatile ("sti")
```

Enable interrupts

5.22.3 Function Documentation

5.22.3.1 idt_init()

```
void idt_init (
    void )
```

Creates and installs the Interrupt Descriptor Table.

5.22.3.2 idt_install()

```
void idt_install (
    int vector,
    void(*) (void *) handler )
```

Installs an interrupt handler

5.22.3.3 irq_init()

```
void irq_init (
    void )
```

Installs the initial interrupt handlers for the first 32 IRQ lines. Most do a panic for now.

5.22.3.4 pic_init()

```
void pic_init (
    void )
```

Initializes the programmable interrupt controllers and performs the necessary remapping of IRQs. Leaves interrupts turned off.

5.23 interrupts.h

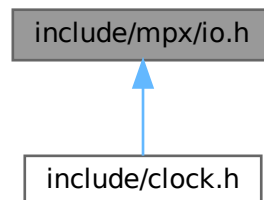

[Go to the documentation of this file.](#)

```
00001 #ifndef MPX_INTERRUPTS_H

00029
00031 void idt_install(int vector, void (*handler)(void *));
00032
00033 #endif
```

5.24 include/mpx/io.h File Reference

Kernel macros to read and write I/O ports.

This graph shows which files directly or indirectly include this file:

Macros

- #define `outb`(port, data) __asm__ volatile ("outb %%al, %%dx" :: "a" (data), "d" (port))
- #define `inb`(port)

5.24.1 Detailed Description

Kernel macros to read and write I/O ports.

5.24.2 Macro Definition Documentation

5.24.2.1 inb

```
#define inb(  
    port )
```

Value:

```
{  
    unsigned char r;  
    __asm__ volatile ("inb %%dx, %%al" : "=a" (r) : "d" (port));  
    r;  
}
```

Read one byte from an I/O port

Parameters

<i>port</i>	The port to read from
-------------	-----------------------

Returns

A byte of data read from the port

5.24.2.2 outb

```
#define outb(  
    port,  
    data ) __asm__ volatile ("outb %%al, %%dx" :: "a" (data), "d" (port))
```

Write one byte to an I/O port

Parameters

<i>port</i>	The port to write to
<i>data</i>	The byte to write to the port

5.25 io.h

[Go to the documentation of this file.](#)

```
00001 #ifndef MPX_IO_H

00026     r; \
00027 }}
00028
00029 #endif

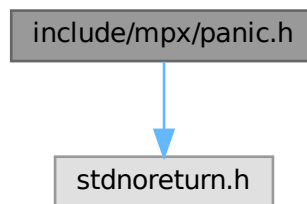

```

5.26 include/mpx/panic.h File Reference

Common system functions and definitions.

```
#include <stdnoreturn.h>
```

Include dependency graph for panic.h:

Functions

- noreturn [__attribute__](#) ((no_caller_saved_registers)) void kpanic(const char *msg)

5.26.1 Detailed Description

Common system functions and definitions.

5.26.2 Function Documentation

5.26.2.1 [__attribute__](#) ()

```

noreturn __attribute__ (
    (no_caller_saved_registers) ) const

```

Kernel panic. Prints an error message and halts.

Parameters

<i>msg</i>	A message to display before halting
------------	-------------------------------------

5.27 panic.h

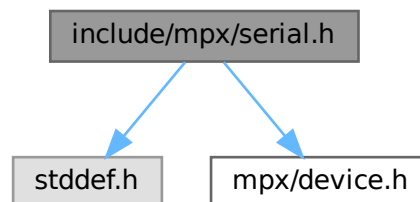

[Go to the documentation of this file.](#)

```
00001 #ifndef MPX_PANIC_H

00016  non-standard attribute is required for clang < 15
00017  */
00018 noreturn __attribute__((no_caller_saves_registers)) void kpanic(const char *msg);
00019
00020 #endif
```

5.28 include/mpx/serial.h File Reference

Kernel functions and constants for handling serial I/O.

```
#include <stddef.h>
#include <mpx/device.h>
Include dependency graph for serial.h:
```

Functions

- int [serial_init](#) (device dev)
- int [serial_out](#) (device dev, const char *buffer, size_t len)
- int [serial_poll](#) (device dev, char *buffer, size_t len)

5.28.1 Detailed Description

Kernel functions and constants for handling serial I/O.

5.28.2 Function Documentation

5.28.2.1 serial_init()

```
int serial_init (
    device dev )
```

Initializes devices for user input and output

Parameters

<i>device</i>	A serial port to initialize (COM1, COM2, COM3, or COM4)
---------------	---

Returns

0 on success, non-zero on failure

5.28.2.2 serial_out()

```
int serial_out (
    device dev,
    const char * buffer,
    size_t len )
```

Writes a buffer to a serial port

Parameters

<i>device</i>	The serial port to output to
<i>buffer</i>	A pointer to an array of characters to output
<i>len</i>	The number of bytes to write

Returns

The number of bytes written

5.28.2.3 serial_poll()

```
int serial_poll (
    device dev,
```

```
char * buffer,
size_t len )
```

Reads a string from a serial port

Parameters

<i>device</i>	The serial port to read data from
<i>buffer</i>	A buffer to write data into as it is read from the serial port
<i>count</i>	The maximum number of bytes to read

Returns

The number of bytes read on success, a negative number on failure

5.29 serial.h

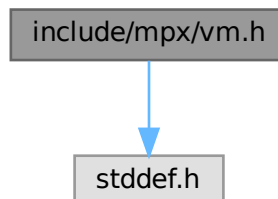

[Go to the documentation of this file.](#)

```
00001 #ifndef MPX_SERIAL_H

```

5.30 include/mpx/vm.h File Reference

Kernel functions for virtual memory and primitive allocation.

```
#include <stddef.h>
Include dependency graph for vm.h:
```

Functions

- void * [kmalloc](#) (size_t size, int align, void **phys_addr)
- void [vm_init](#) (void)

5.30.1 Detailed Description

Kernel functions for virtual memory and primitive allocation.

5.30.2 Function Documentation

5.30.2.1 kmalloc()

```
void * kmalloc (
    size_t size,
    int align,
    void ** phys_addr )
```

Allocates memory from a primitive heap.

Parameters

<i>size</i>	The size of memory to allocate
<i>align</i>	If non-zero, align the allocation to a page boundary
<i>phys_addr</i>	If non-NULL, a pointer to a pointer that will hold the physical address of the new memory

Returns

The newly allocated memory

5.30.2.2 vm_init()

```
void vm_init (
    void )
```

Initializes the kernel page directory and initial kernel heap area. Performs identity mapping of the kernel frames such that the virtual addresses are equivalent to the physical addresses.

5.31 vm.h

[Go to the documentation of this file.](#)

```
00001 #ifndef MPX_VM_H
00002 #define MPX_VM_H
```

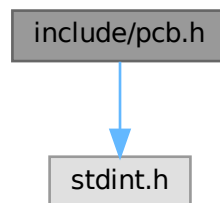

```
00003
00009 #include <stddef.h>
00010
00019 void *kmalloc(size_t size, int align, void **phys_addr);
00020
00026 void vm_init(void);
00027
00028 #endif
```

5.32 include/pcb.h File Reference

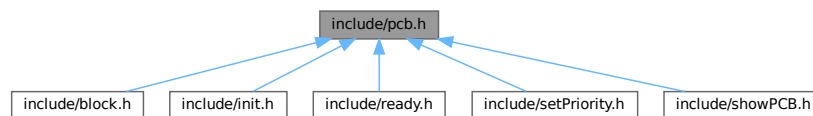

Process Control Block queue and stack functions.

```
#include <stdint.h>
```

Include dependency graph for pcb.h:

This graph shows which files directly or indirectly include this file:

Data Structures

- struct `pcb`
- struct `pcb_queue`

Macros

- `#define PCB_NAME_MAX_LEN 16`
- `#define PCB_STACK_MIN_SIZE 1024`

Enumerations

- enum **process_class** { **CLASS_SYSTEM** = 0 , **CLASS_USER** = 1 }
- enum **execution_state** { **STATE_READY** = 0 , **STATE_RUNNING** = 1 , **STATE_BLOCKED** = 2 }
- enum **dispatch_state** { **DISPATCH_ACTIVE** = 0 , **DISPATCH_SUSPENDED** = 1 }

Functions

- struct **pcb** * **pcb_allocate** (void)
Allocates a new PCB and its stack.
- int **pcb_free** (struct **pcb** *ptr)
Frees a previously allocated PCB and its stack.
- struct **pcb** * **pcb_setup** (const char *name, int process_class, int priority)
Initializes a PCB with given name, class, and priority.
- struct **pcb** * **pcb_find** (const char *name)
Finds a PCB by its name in all queues.
- void **pcb_insert** (struct **pcb** *ptr)
Insert a PCB into the appropriate queue.
- int **pcb_remove** (struct **pcb** *ptr)
Remove a PCB from its current queue.

Variables

- struct **pcb_queue** **ready_queue**
- struct **pcb_queue** **blocked_queue**
- struct **pcb_queue** **suspended_ready_queue**
- struct **pcb_queue** **suspended_blocked_queue**

5.32.1 Detailed Description

Process Control Block queue and stack functions.

Defines the data structure types and functions for operating the PCB queues.

- Ready Queue: PCBs waiting to be executed by priority.
- Blocked Queue: PCBs waiting on something else to happen before its ready.
- Suspended-Ready Queue: PCBs not in the stack but ready.
- Suspended-Blocked Queue: PCBs not in the stack and blocked.

5.32.2 Function Documentation

5.32.2.1 `pcb_allocate()`

```
struct pcb * pcb_allocate (
    void )
```

Allocates a new PCB and its stack.

Initializes all members to zero and sets stack pointer.

Returns

Pointer to the allocated PCB, or NULL if allocation fails.

5.32.2.2 `pcb_find()`

```
struct pcb * pcb_find (
    const char * name )
```

Finds a PCB by its name in all queues.

Parameters

<i>name</i>	Name of the process to find.
-------------	------------------------------

Returns

Pointer to the PCB if found, NULL otherwise.

5.32.2.3 `pcb_free()`

```
int pcb_free (
    struct pcb * ptr )
```

Frees a previously allocated PCB and its stack.

Parameters

<i>ptr</i>	Pointer to the PCB to free.
------------	-----------------------------

Returns

0 on success, -1 if *ptr* is NULL.

5.32.2.4 pcb_insert()

```
void pcb_insert (
    struct pcb * ptr )
```

Insert a PCB into the appropriate queue.

Chooses the correct queue based on the PCB's dispatch and execution state, then inserts it. If the target queue is the ready queue, PCBs are inserted by priority (FIFO within same priority). Otherwise, they are appended FIFO at the tail.

Parameters

<i>ptr</i>	Pointer to the PCB to insert.
------------	-------------------------------

5.32.2.5 pcb_remove()

```
int pcb_remove (
    struct pcb * ptr )
```

Remove a PCB from its current queue.

Locates the PCB's queue based on its state, then detaches it by fixing neighboring links. Clears the PCB's next/prev pointers.

Parameters

<i>ptr</i>	Pointer to the PCB to remove.
------------	-------------------------------

Returns

0 on success, -1 if PCB is NULL or not found in any queue.

5.32.2.6 pcb_setup()

```
struct pcb * pcb_setup (
    const char * name,
    int process_class,
    int priority )
```

Initializes a PCB with given name, class, and priority.

Sets default execution and dispatch states.

Parameters

<i>name</i>	Name of the process.
<i>process_class</i>	Class of the process (SYSTEM/USER).
<i>priority</i>	Initial priority (0-9).

Returns

Pointer to initialized PCB, or NULL if allocation/setup fails.

5.32.3 Variable Documentation**5.32.3.1 ready_queue**

```
struct pcb_queue ready_queue [extern]
```

TODO Will add in error messaging at different points

```
void proc3 (
    void )
```

A test process that prints a message then yields, exiting after 3 iterations.

5.34.2.4 proc4()

```
void proc4 (
    void )
```

A test process that prints a message then yields, exiting after 4 iterations.

5.34.2.5 proc5()

```
void proc5 (
    void )
```

A test process that prints a message then yields, exiting after 5 iterations.

5.34.2.6 sys_idle_process()

```
void sys_idle_process (
    void )
```

System idle process. Used in dispatching. It will be dispatched if NO other processes are available to execute. Must be a system process.

5.35 processes.h

[Go to the documentation of this file.](#)

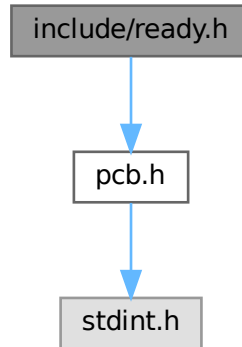

```

5.36 include/ready.h File Reference

Commands to suspend or resume a process.

```
#include "pcb.h"
```

Include dependency graph for ready.h:

Functions

- void **suspend_help** (void)
Prints the help message for the suspend command.
- int **suspend_pcb** (const char *process_name)
Puts a non-system process in the suspended state, and moves it to the appropriate queue.
- void **suspend_command** (const char *args)
Handles command-line arguments for the suspend command.
- void **resume_help** (void)
Prints the help message for the resume command.
- int **resume_pcb** (const char *process_name)
Puts a process in the active (not suspended) state, and moves it to the appropriate queue.
- void **resume_command** (const char *args)
Handles command-line arguments for the resume command.

5.36.1 Detailed Description

Commands to suspend or resume a process.

5.36.2 Function Documentation

5.36.2.1 resume_command()

```
void resume_command (
    const char * args )
```

Handles command-line arguments for the resume command.

Parameters

<i>args</i>	Command argument string (process name or "help").
-------------	---

5.36.2.2 resume_pcb()

```
int resume_pcb (  
    const char * process_name )
```

Puts a process in the active (not suspended) state, and moves it to the appropriate queue.

Parameters

<i>process_name</i>	Process's name (checks for validity)
---------------------	--------------------------------------

Returns

int 0 for success, -1 for invalid process/name, and 1 if already active.

5.36.2.3 suspend_command()

```
void suspend_command (  
    const char * args )
```

Handles command-line arguments for the suspend command.

Parameters

<i>args</i>	Command argument string (process name or "help").
-------------	---

5.36.2.4 suspend_pcb()

```
int suspend_pcb (  
    const char * process_name )
```

Puts a non-system process in the suspended state, and moves it to the appropriate queue.

Parameters

<i>process_name</i>	Process's name (checks for validity)
---------------------	--------------------------------------

Returns

int 0 for success, -1 for invalid process/name, -2 if given a system process, and 1 if already suspended.

5.37 ready.h

[Go to the documentation of this file.](#)

```
00001 #ifndef PCB_READY_H
00002 #define PCB_READY_H
00003
00009 #include "pcb.h"
00010
00014 void suspend_help(void);
00015
00021 int suspend_pcb(const char* process_name);
00022
00027 void suspend_command(const char *args);
00028
00032 void resume_help(void);
00033
00039 int resume_pcb(const char* process_name);
00040
00045 void resume_command(const char *args);
00046
00047 #endif
```

5.38 setPriority.h

```
00001 #ifndef SETPRIORITY_H
00002 #define SETPRIORITY_H
00003
00004 #include <pcb.h>
00005 #include <sys_req.h>
00006 #include <string.h>
00007
00017 void set_priority_command(const char* args);
00018
00022 void set_priority_help(void);
00023
00029 void setPriority(char* name, int newPriority);
00030
00031
00032 #endif
```

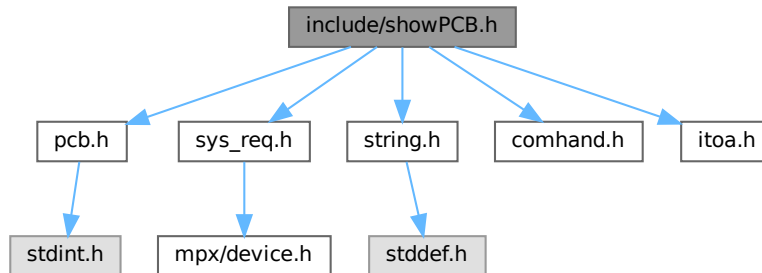

5.39 include/showPCB.h File Reference

Provides ability to display a specific PCB, all PCBs, or PCBs in specific queues.

```
#include <pcb.h>
#include <sys_req.h>
#include <string.h>
#include <comhand.h>
```

```
#include <itoa.h>
```

Include dependency graph for showPCB.h:

Functions

- void [show_command](#) (const char *args)
Handles which functions should be used, for use in comhand.
- void [showPCB](#) (const char *name)
Displays the details for a PCB if the PCB exists.
- void [showReady](#) (void)
Displays all PCBs in the ready queue.
- void [showBlocked](#) (void)
Displays all PCBs in the blocked queue.
- void [showAllPCB](#) (void)
Displays all PCBs in all queues.
- void [show_pcb_help](#) (void)
Help function for the show command.
- void **showSuspended** (void)
Displays all PCBs in the suspended queues.

5.39.1 Detailed Description

Provides ability to display a specific PCB, all PCBs, or PCBs in specific queues.

5.39.2 Function Documentation

5.39.2.1 [show_command\(\)](#)

```
void show_command (
    const char * args )
```

Handles which functions should be used, for use in comhand.

Parameters

<i>args</i>	Arguments used for performing correct function
-------------	--

Function for use in command handler. Handles arguments for showing pcbs

5.39.2.2 show_pcb_help()

```
void show_pcb_help (  
    void )
```

Help function for the show command.

Help message for showing pcbs

5.39.2.3 showAllPCB()

```
void showAllPCB (  
    void )
```

Displays all PCBs in all queues.

Prints all processes

5.39.2.4 showBlocked()

```
void showBlocked (  
    void )
```

Displays all PCBs in the blocked queue.

Prints all processes in the blocked queue

5.39.2.5 showPCB()

```
void showPCB (  
    const char * name )
```

Displays the details for a PCB if the PCB exists.

Parameters

<i>name</i>	The name of the PCB to be displayed
-------------	-------------------------------------

Takes process name (string) and prints details for the process

5.39.2.6 showReady()

```
void showReady (
    void )
```

Displays all PCBs in the ready queue.

Prints all processes in the ready queue

5.40 showPCB.h

[Go to the documentation of this file.](#)

```
00001 #ifndef SHOWPCB_H
00002 #define SHOWPCB_H
00003
00004 #include <pcb.h>

00050 void showSuspended(void);
00051
00052 #endif
```

5.41 include/stdlib.h File Reference

A subset of standard C library functions.

Functions

- int [atoi](#) (const char *s)

5.41.1 Detailed Description

A subset of standard C library functions.

5.41.2 Function Documentation

5.41.2.1 atoi()

```
int atoi (
    const char * s )
```

Convert an ASCII string to an integer

Parameters

s	A NUL-terminated string
----------	-------------------------

Returns

The value of the string converted to an integer

5.42 stdlib.h

[Go to the documentation of this file.](#)

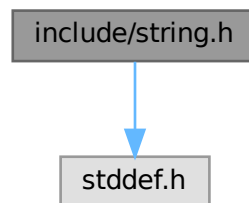

```
00001 #ifndef MPX_STDLIB_H
00002 #define MPX_STDLIB_H
00003
00014 int atoi(const char *s);
00015
00016 #endif
```

5.43 include/string.h File Reference

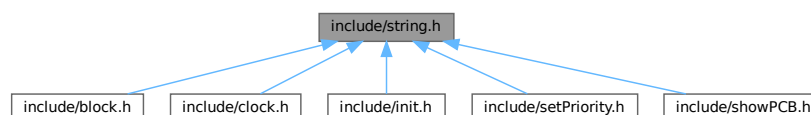

A subset of standard C library functions.

```
#include <stddef.h>
```

Include dependency graph for string.h:

This graph shows which files directly or indirectly include this file:

Functions

- void * [memcpy](#) (void *restrict dst, const void *restrict src, size_t n)
- void * [memset](#) (void *address, int c, size_t n)
- int [strcmp](#) (const char *s1, const char *s2)
- int [strncmp](#) (const char *s1, const char *s2, unsigned int n)
- size_t [strlen](#) (const char *s)
- char * [strtok](#) (char *restrict s1, const char *restrict s2)
Split string into tokens.
- char * [strncpy](#) (char *dest, const char *src, unsigned int num_of_chars)
Copy a string with length limit.

5.43.1 Detailed Description

A subset of standard C library functions.

5.43.2 Function Documentation

5.43.2.1 memcpy()

```
void * memcpy (
    void *restrict dst,
    const void *restrict src,
    size_t n )
```

Copy a region of memory.

Parameters

<i>dst</i>	The destination memory region
<i>src</i>	The source memory region
<i>n</i>	The number of bytes to copy

Returns

A pointer to the destination memory region

5.43.2.2 memset()

```
void * memset (
    void * address,
    int c,
    size_t n )
```

Fill a region of memory.

Parameters

<i>address</i>	The start of the memory region
<i>c</i>	The byte to fill memory with
<i>n</i>	The number of bytes to fill

Returns

A pointer to the filled memory region

5.43.2.3 strcmp()

```
int strcmp (
    const char * s1,
    const char * s2 )
```

Compares two strings

Parameters

<i>s1</i>	The first string to compare
<i>s2</i>	The second string to compare

Returns

0 if strings are equal, <0 if *s1* is lexicographically before *s2*, >0 otherwise

5.43.2.4 strlen()

```
size_t strlen (
    const char * s )
```

Returns the length of a string.

Parameters

<i>s</i>	A NUL-terminated string
----------	-------------------------

Returns

The number of bytes in the string (not counting NUL terminator)

5.43.2.5 strncpy()

```
char * strncpy (
    char * dest,
    const char * src,
    unsigned int num_of_chars )
```

Copy a string with length limit.

Parameters

<i>dest</i>	Destination buffer.
<i>src</i>	Source string.
<i>num_of_chars</i>	Maximum number of characters to copy.

Returns

Pointer to destination buffer.

5.43.2.6 strtok()

```
char * strtok (
    char *restrict s1,
    const char *restrict s2 )
```

Split string into tokens.

Parameters

<i>s1</i>	String to tokenize (NULL to continue tokenizing).
<i>s2</i>	Delimiter characters.

Returns

Pointer to next token, or NULL if none.

5.44 string.h

[Go to the documentation of this file.](#)

```
00001 #ifndef MPX_STRING_H

00019
00027 void* memset(void *address, int c, size_t n);
00028
```

```

00035 int strcmp(const char *s1, const char *s2);
00036
00037 int strncmp(const char *s1, const char *s2, unsigned int n);
00038
00044 size_t strlen(const char *s);
00045
00053 char* strtok(char * restrict s1, const char * restrict s2);
00054
00063 char* strncpy(char* dest, const char* src, unsigned int num_of_chars);
00064 #endif

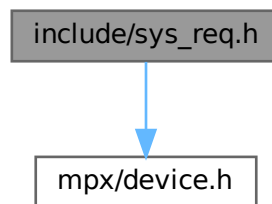

```

5.45 include/sys_req.h File Reference

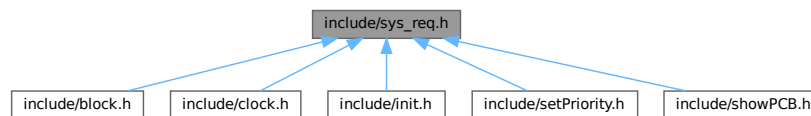

System request function and constants.

```
#include <mpx/device.h>
```

Include dependency graph for sys_req.h:

This graph shows which files directly or indirectly include this file:

Macros

- #define **INVALID_OPERATION** (-1)
- #define **INVALID_BUFFER** (-2)
- #define **INVALID_COUNT** (-3)

Enumerations

- enum **op_code** { **EXIT** , **IDLE** , **READ** , **WRITE** }

Functions

- int `sys_req` (op_code op,...)

5.45.1 Detailed Description

System request function and constants.

5.45.2 Function Documentation

5.45.2.1 sys_req()

```
int sys_req (
    op_code op,
    ... )
```

Request an MPX kernel operation.

Parameters

<i>op_code</i>	One of READ, WRITE, IDLE, or EXIT
...	As required for READ or WRITE

Returns

Varies by operation

5.46 sys_req.h

[Go to the documentation of this file.](#)

```
00001 #ifndef MPX_SYS_REQ_H
00002 #define MPX_SYS_REQ_H
00003
00004 #include <mpx/device.h>
00005

00021 #define INVALID_COUNT       (-3)
00022
00029 int sys_req(op_code op, ...);
00030
00031 #endif
```

5.47 include/version.h File Reference

Displays the current version of MacaroniOS.

Macros

- `#define GIT_DATE "unknown"`
- `#define GIT_HASH "unknown"`
- `#define GIT_DIRTY "unknown"`

Functions

- void **version_help** (void)
Prints help information related to the version command.
- void **version_latest** (void)
Displays the latest version.
- void **version_history** (void)
Displays the past and present versions.
- void **version_command** (const char *args)
Main handler for the version command.

5.47.1 Detailed Description

Displays the current version of MacaroniOS.

5.47.2 Function Documentation

5.47.2.1 version_command()

```
void version_command (  
    const char * args )
```

Main handler for the version command.

Parameters

<i>args</i>	The argument string passed after 'version'
-------------	--

5.48 version.h

[Go to the documentation of this file.](#)
