Chapter 1

Macaroni Penguins

CS450: Operating Systems Structure

Fall 2025

See the repo at https://github.com/WVU-CS450/MacaroniPenguins.

1.1 GETTING STARTED

Install WSL if you need to:

wsl --install -d ubuntu

Clone this repo into a linux environment (WSL, Ubuntu, etc):

git clone https://github.com/WVU-CS450/MacaroniPenguins.git

Prep your linux environment by running the following commands:

```
sudo apt update sudo apt install -y clang make nasm git binutils-i686-linux-gnu qemu-system-x86 gdb
```

Then run make and ./mpx.sh.

For more information, either run the help command inside of MacaroniOS, or consult the $doc/USER-\leftarrow GUIDE.pdf$.

1.2 CONTRIBUTING

After making changes, running version will show that your working directory is 'dirty'. This simply means that you have uncommitted changes.

Ensure you have checked out the correct branch and pulled its latest changes. Stage/add the relevant files before committing them.

Now you can run make clean and make again, run ./mpx.sh, and finally run version to see your latest commit hash and showing that your working directory is 'clean'.

When you're done, add your contributions to $\frac{\text{dev}}{\text{CONTRIBUTIONS.docx}}$ and save it as $\frac{\text{doc}}{\leftarrow}$ CONTRIBUTIONS.pdf.

2 Macaroni Penguins

1.3 DOXYGEN

Install doxygen and dependancies:

sudo apt update sudo apt install -y doxygen texlive-full texlive-latex-base texlive-latex-extra

Create the configuration file (convention is a Doxyfile):

doxygen -g Doxyfile

Edit the file to your liking, reference the doxygen manual if needed, then run doxygen:

When releasing a new version of MacaroniOS, remember to change the PROJECT_NUMER (to R1, R2, etc) and OUTPUT_DIRECTORY (from dev/doxygen to doc). Also remember to change user/version.c.

Then $\operatorname{\operatorname{cd}}$ into the generated latex directory and run:

make pdf

In the same directory, a refman.pdf is generated. Save this file as doc/PROGRAMMER-GUIDE.pdf.

Chapter 2

Data Structure Index

2.1 Data Structures

Here are the data structures with brief descriptions:

rtc_date_t	7
rtc_time_t	7
stores	
Struct that stores data relating to the time, and Hours	7

4 Data Structure Index

Chapter 3

File Index

3.1 File List

Here is a list of all documented files with brief descriptions:

include/clock.h	
Handles accesses to the Real Time Clock (RTC)	9
include/comhand.h	
Command handler interface for the OS. Reads from the polling input and executes commands	10
include/ctype.h	
A subset of standard C library functions	11
include/exit.h	
Header file for the exit command used in the command handler. Exits the terminal when called	
and confirmed by the user	12
include/help.h	
Header for the help command used in command handler. Used to list the commands available	
to the user	13
include/itoa.h	
Declaration for interger-to-ASCII conversion	13
include/itoBCD.h	
Function that converts an integer into a string that is representative of the binary coded decimal	
format of the input integer	14
include/memory.h	
MPX-specific dynamic memory functions	15
include/processes.h	
Provided system process and user processes for testing	24
include/stdlib.h	
A subset of standard C library functions	26
include/string.h	
A subset of standard C library functions	26
include/sys_req.h	
System request function and constants	29
include/version.h	
Displays the current version of MacaroniOS	30
include/mpx/device.h	16
include/mpx/gdt.h	
Kernel functions to initialize the Global Descriptor Table	17
include/mpx/interrupts.h	
Kernel functions related to software and hardware interrupts	17
include/mpx/io.h	
Kernel macros to read and write I/O ports	19

6 File Index

include/mpx/panic.h	
Common system functions and definitions	20
include/mpx/serial.h	
Kernel functions and constants for handling serial I/O	21
include/mpx/vm.h	
Kernel functions for virtual memory and primitive allocation	23

Chapter 4

Data Structure Documentation

4.1 rtc date t Struct Reference

Data Fields

- uint8_t day
- uint8_t month
- uint8_t year

The documentation for this struct was generated from the following file:

· include/clock.h

4.2 rtc time t Struct Reference

Data Fields

- uint8_t second
- uint8_t minute
- uint8_t hour

The documentation for this struct was generated from the following file:

• include/clock.h

4.3 stores Struct Reference

Struct that stores data relating to the time, and Hours.

4.3.1 Detailed Description

Struct that stores data relating to the time, and Hours.

Struct that stores data relating to the date, and Year.

The documentation for this struct was generated from the following file:

· include/clock.h

Chapter 5

File Documentation

5.1 include/clock.h File Reference

Handles accesses to the Real Time Clock (RTC)

```
#include <string.h>
#include <sys_req.h>
#include <stdint.h>
#include <mpx/interrupts.h>
#include <mpx/io.h>
Include dependency graph for clock.h:
```

5.2 clock.h

Go to the documentation of this file.

```
00001 #ifndef CLOCK_H
00002 #define CLOCK_H
00003
00004 #include <string.h>
00005 #include <sys_req.h>
00006 #include <stdint.h>
00007 #include <mpx/interrupts.h>
00008 #include <mpx/io.h>
00009
00019 typedef struct {
00020 uint8_t second;
00021 uint8_t minute;
00022 uint8_t hour;
00023 } rtc_time_t;
00029 typedef struct {
00030 uint8_t day;
00031 uint8_t month;
           uint8_t year; // Last two digits of the year
00032
00033 } rtc_date_t;
00035
00040 void get_time(rtc_time_t *time);
00041
00046 void set_time(const rtc_time_t *time);
00047
00052 void get_date(rtc_date_t *date);
00058 void set_date(const rtc_date_t *date);
00059
00064 void print_time(rtc_time_t *time);
00065
00070 void print_date(const rtc_date_t *date);
```

```
00075 void clock_help(void);
00081 void clock_command(const char *args);
00082
00083 //---- Helper Functions ----//
00084
00090 void my_strcat(char *dest, const char *src);
00091
00097 void my_strcpy(char *dest, const char *src);
00098
00104 void rtc_write(uint8_t reg, uint8_t value);
00105
00110 uint8_t rtc_read(uint8_t reg);
00111
00117 uint8_t bin_to_bcd(uint8_t value);
00118
00124 uint8_t bcd_to_bin(uint8_t value);
00125
00129 void tz_correction(void);
00130
00131 #endif
```

5.3 include/comhand.h File Reference

Command handler interface for the OS. Reads from the polling input and executes commands.

Functions

void com_startup (void)

Prints a welcome message and penguin ASCII art to the terminal.

void trim_Input (char *str)

Trim function to remove \n and \r from the string.

void comhand (void)

Enters a loop and waits for the user to input commands.

5.3.1 Detailed Description

Command handler interface for the OS. Reads from the polling input and executes commands.

5.3.2 Function Documentation

5.3.2.1 trim_Input()

Trim function to remove \n and \r from the string.

Parameters

str string variable to trim

5.6 ctype.h 11

5.4 comhand.h

Go to the documentation of this file.

```
00001 #ifndef COMHAND_H
00002 #define COMHAND_H
00003
00013 void com_startup(void);
00014
00019 void trim_Input(char *str);
00020
00024 void comhand(void);
00025
00026 #endif
```

5.5 include/ctype.h File Reference

A subset of standard C library functions.

Functions

• int isspace (int c)

5.5.1 Detailed Description

A subset of standard C library functions.

5.5.2 Function Documentation

5.5.2.1 isspace()

```
int isspace ( \quad \text{int } c \ )
```

Determine if a character is whitespace.

Parameters

```
c Character to check
```

Returns

Non-zero if space, 0 if not space

5.6 ctype.h

Go to the documentation of this file.

```
00001 #ifndef MPX_CTYPE_H
00002 #define MPX_CTYPE_H
00003
00014 int isspace(int c);
00015
00016 #endif
```

5.7 include/exit.h File Reference

Header file for the exit command used in the command handler. Exits the terminal when called and confirmed by the user.

Functions

- void exit_help (void)
- int exit_command (const char *args)

Begins the shutdown process when the user types 'exit' in the terminal. Confirmation by typing 'Y' or 'n' is then required to completely exit.

5.7.1 Detailed Description

Header file for the exit command used in the command handler. Exits the terminal when called and confirmed by the user.

Author

Caleb Edwards

5.7.2 Function Documentation

5.7.2.1 exit_command()

Begins the shutdown process when the user types 'exit' in the terminal. Confirmation by typing 'Y' or 'n' is then required to completely exit.

Parameters

arg_counter	Counts the number of arguments input.
arg_vector	Stores the arguments.

Returns

int return 1 to confirm exit and 0 to return to terminal.

5.8 exit.h

Go to the documentation of this file.

```
00001 #ifndef EXIT_H
00002 #define EXIT_H
00010 void exit_help(void);
00011
00020 int exit_command(const char *args);
00021
00022 #endif
```

5.9 include/help.h File Reference

Header for the help command used in command handler. Used to list the commands available to the user.

Functions

- void help_message (void)
- void help_command (const char *args)

Prints all commands available into the terminal when the user types 'help' in the input.

5.9.1 Detailed Description

Header for the help command used in command handler. Used to list the commands available to the user.

Author

Caleb Edwards

5.10 help.h

Go to the documentation of this file.

```
00001 #ifndef HELP_H

00002 #define HELP_H

00010 void help_message(void);

00011

00016 void help_command(const char *args);

00017

00018 #endif
```

5.11 include/itoa.h File Reference

Declaration for interger-to-ASCII conversion.

Functions

void itoa (int num, char *buffer)
 Converts an integer to a C-string.

5.11.1 Detailed Description

Declaration for interger-to-ASCII conversion.

5.11.2 Function Documentation

5.11.2.1 itoa()

```
void itoa (
                int num,
                 char * buffer )
```

Converts an integer to a C-string.

Parameters

num	The integer to convert.
buffer	Pointer to an array to store the string.

5.12 itoa.h

Go to the documentation of this file.

```
00001 #ifndef ITOA_H
00002 #define ITOA_H
00003
00015 void itoa(int num, char* buffer);
00016
00017 #endif
```

5.13 include/itoBCD.h File Reference

Function that converts an integer into a string that is representative of the binary coded decimal format of the input integer.

Functions

• void itoBCD (int num, char *buffer)

5.13.1 Detailed Description

Function that converts an integer into a string that is representative of the binary coded decimal format of the input integer.

5.13.2 Function Documentation

5.13.2.1 itoBCD()

Convert an integer to an Binary Coded Decimal

Parameters

int	Integer being converted into a Binary Coded Decimal
s	A buffer to hold the created string

5.14 itoBCD.h

Go to the documentation of this file.

```
00001 #ifndef ITOBCD_H
00002 #define ITOBCD_H
00003
00017 void itoBCD(int num, char* buffer);
00018
00019 #endif
```

5.15 include/memory.h File Reference

MPX-specific dynamic memory functions.

```
#include <stddef.h>
Include dependency graph for memory.h:
```

Functions

- void * sys_alloc_mem (size_t size)
- int sys free mem (void *ptr)
- void sys_set_heap_functions (void *(*alloc_fn)(size_t), int(*free_fn)(void *))

5.15.1 Detailed Description

MPX-specific dynamic memory functions.

5.15.2 Function Documentation

5.15.2.1 sys_alloc_mem()

Allocate dynamic memory.

Parameters

```
size The amount of memory, in bytes, to allocate
```

Returns

NULL on error, otherwise the address of the newly allocated memory

5.15.2.2 sys_free_mem()

```
int sys_free_mem ( \mbox{void} \ * \ ptr \ )
```

Free dynamic memory.

Parameters

ptr	The address of dynamically allocated memory to free
-----	---

Returns

0 on success, non-zero on error

5.15.2.3 sys_set_heap_functions()

Installs user-supplied heap management functions.

Parameters

alloc A function that dynamically allocates memory		A function that dynamically allocates memory
	_fn	
free_fn A function that frees dynamically allocated		A function that frees dynamically allocated memory

5.16 memory.h

Go to the documentation of this file.

```
00001 #ifndef MPX_MEMORY_H
00002 #define MPX_MEMORY_H
00003
00004 #include <stddef.h>
00005
00016 void *sys_alloc_mem(size_t size);
00017
00023 int sys_free_mem(void *ptr);
00024
00030 void sys_set_heap_functions(void * (*alloc_fn)(size_t), int (*free_fn)(void *));
00031
00032 #endif
```

5.17 device.h

5.18 include/mpx/gdt.h File Reference

Kernel functions to initialize the Global Descriptor Table.

Functions

void gdt_init (void)

5.18.1 Detailed Description

Kernel functions to initialize the Global Descriptor Table.

5.18.2 Function Documentation

5.18.2.1 gdt_init()

```
void gdt_init (
     void )
```

Creates and installs the Global Descriptor Table.

5.19 gdt.h

Go to the documentation of this file.

```
00001 #ifndef MPX_GDT_H

00002 #define MPX_GDT_H

00003

00010 void gdt_init(void);

00011

00012 #endif
```

5.20 include/mpx/interrupts.h File Reference

Kernel functions related to software and hardware interrupts.

This graph shows which files directly or indirectly include this file:

Macros

```
#define cli() __asm__ volatile ("cli")#define sti() __asm__ volatile ("sti")
```

Functions

- void irq_init (void)
- void pic_init (void)
- void idt_init (void)
- void idt_install (int vector, void(*handler)(void *))

5.20.1 Detailed Description

Kernel functions related to software and hardware interrupts.

5.20.2 Macro Definition Documentation

5.20.2.1 cli

```
#define cli( ) __asm__ volatile ("cli")
```

Disable interrupts

5.20.2.2 sti

```
#define sti() __asm__ volatile ("sti")
```

Enable interrupts

5.20.3 Function Documentation

5.20.3.1 idt_init()

```
void idt_init (
     void )
```

Creates and installs the Interrupt Descriptor Table.

5.20.3.2 idt_install()

Installs an interrupt handler

5.20.3.3 irq_init()

```
void irq_init (
     void
```

Installs the initial interrupt handlers for the first 32 IRQ lines. Most do a panic for now.

5.21 interrupts.h

5.20.3.4 pic_init()

```
void pic_init (
     void )
```

Initializes the programmable interrupt controllers and performs the necessary remapping of IRQs. Leaves interrupts turned off.

5.21 interrupts.h

Go to the documentation of this file.

```
00001 #ifndef MPX_INTERRUPTS_H
00002 #define MPX_INTERRUPTS_H
00003
00010 #define cli() __asm__ volatile ("cli")
00011
00013 #define sti() __asm__ volatile ("sti")
00014
00019 void irq_init(void);
00020
00025 void pic_init(void);
00026
00028 void idt_init(void);
00029
00031 void idt_install(int vector, void (*handler)(void *));
00032
00033 #endif
```

5.22 include/mpx/io.h File Reference

Kernel macros to read and write I/O ports.

This graph shows which files directly or indirectly include this file:

Macros

- #define outb(port, data) __asm__ volatile ("outb %%al, %%dx" :: "a" (data), "d" (port))
- #define inb(port)

5.22.1 Detailed Description

Kernel macros to read and write I/O ports.

5.22.2 Macro Definition Documentation

5.22.2.1 inb

Read one byte from an I/O port

Parameters

port The port to read from	m
----------------------------	---

Returns

A byte of data read from the port

5.22.2.2 outb

Write one byte to an I/O port

Parameters

port	The port to write to
data	The byte to write to the port

5.23 io.h

Go to the documentation of this file.

5.24 include/mpx/panic.h File Reference

Common system functions and definitions.

```
#include <stdnoreturn.h>
Include dependency graph for panic.h:
```

Functions

• noreturn __attribute__ ((no_caller_saved_registers)) void kpanic(const char *msg)

5.25 panic.h 21

5.24.1 Detailed Description

Common system functions and definitions.

5.24.2 Function Documentation

Kernel panic. Prints an error message and halts.

Parameters

```
msg A message to display before halting
```

5.25 panic.h

Go to the documentation of this file.

```
00001 #ifndef MPX_PANIC_H
00002 #define MPX_PANIC_H
00003
00004 #include <stdnoreturn.h>
00005
00005
00015 /*
00016 non-standard attribute is required for clang < 15
00017 */
00018 noreturn __attribute__((no_caller_saved_registers)) void kpanic(const char *msg);
00019
00020 #endif
```

5.26 include/mpx/serial.h File Reference

Kernel functions and constants for handling serial I/O.

```
#include <stddef.h>
#include <mpx/device.h>
Include dependency graph for serial.h:
```

Functions

- int serial_init (device dev)
- int serial out (device dev, const char *buffer, size t len)
- int serial_poll (device dev, char *buffer, size_t len)

5.26.1 Detailed Description

Kernel functions and constants for handling serial I/O.

5.26.2 Function Documentation

5.26.2.1 serial_init()

Initializes devices for user input and output

Parameters

device	A serial port to initialize (COM1, COM2, COM3, or COM4)
--------	---

Returns

0 on success, non-zero on failure

5.26.2.2 serial_out()

Writes a buffer to a serial port

Parameters

device	The serial port to output to
buffer	A pointer to an array of characters to output
len	The number of bytes to write

Returns

The number of bytes written

5.26.2.3 serial_poll()

Reads a string from a serial port

Parameters

device	The serial port to read data from
buffer	A buffer to write data into as it is read from the serial port
count The maximum number of bytes to read	

Returns

The number of bytes read on success, a negative number on failure

5.27 serial.h

Go to the documentation of this file.

```
00001 #ifndef MPX_SERIAL_H
00002 #define MPX_SERIAL_H
00003
00004 #include <stddef.h>
00005 #include <mpx/device.h>
00006
00017 int serial_init(device dev);
00018
00026 int serial_out(device dev, const char *buffer, size_t len);
00027
00035 int serial_poll(device dev, char *buffer, size_t len);
00036
00037 #endif
```

5.28 include/mpx/vm.h File Reference

Kernel functions for virtual memory and primitive allocation.

```
#include <stddef.h>
Include dependency graph for vm.h:
```

Functions

void * kmalloc (size_t size, int align, void **phys_addr)
 void vm_init (void)

5.28.1 Detailed Description

Kernel functions for virtual memory and primitive allocation.

5.28.2 Function Documentation

5.28.2.1 kmalloc()

Allocates memory from a primitive heap.

Parameters

size	The size of memory to allocate	
align	If non-zero, align the allocation to a page boundary	
phys_addr Generated by Dox	If non-NULL, a pointer to a pointer that will hold the physical address of the new memory	

Returns

The newly allocated memory

5.28.2.2 vm init()

```
void vm_init (
     void )
```

Initializes the kernel page directory and initial kernel heap area. Performs identity mapping of the kernel frames such that the virtual addresses are equivalent to the physical addresses.

5.29 vm.h

Go to the documentation of this file.

```
00001 #ifndef MPX_VM_H
00002 #define MPX_VM_H
00003
00009 #include <stddef.h>
00010
00010
00019 void *kmalloc(size_t size, int align, void **phys_addr);
00020
00026 void vm_init(void);
00027
00028 #endif
```

5.30 include/processes.h File Reference

Provided system process and user processes for testing.

Functions

- void proc1 (void)
- void proc2 (void)
- void proc3 (void)
- void proc4 (void)
- void proc5 (void)
- void sys_idle_process (void)

5.30.1 Detailed Description

Provided system process and user processes for testing.

5.30.2 Function Documentation

5.30.2.1 proc1()

```
void proc1 (
     void )
```

A test process that prints a message then yields, exiting after 1 iteration.

5.31 processes.h 25

5.30.2.2 proc2()

```
void proc2 (
     void )
```

A test process that prints a message then yields, exiting after 2 iterations.

5.30.2.3 proc3()

```
void proc3 (
     void )
```

A test process that prints a message then yields, exiting after 3 iterations.

5.30.2.4 proc4()

```
void proc4 (
     void )
```

A test process that prints a message then yields, exiting after 4 iterations.

5.30.2.5 proc5()

```
void proc5 (
     void )
```

A test process that prints a message then yields, exiting after 5 iterations.

5.30.2.6 sys_idle_process()

```
void sys_idle_process (
     void )
```

System idle process. Used in dispatching. It will be dispatched if NO other processes are available to execute. Must be a system process.

5.31 processes.h

Go to the documentation of this file.

```
00001 #ifndef MPX_PROCESSES_H
00002 #define MPX_PROCESSES_H
00003
00009 /* ************************
00010 The following functions are needed for Module R3.
00011 ********
00012
00016 void procl(void);
00017
00021 void proc2(void);
00022
00026 void proc3(void);
00027
00031 void proc4(void);
00032
00036 void proc5(void);
00038 /* **
00039 The following function is needed for Module R4.
00041
00046 void sys_idle_process(void);
00047
00048 #endif
```

5.32 include/stdlib.h File Reference

A subset of standard C library functions.

Functions

• int atoi (const char *s)

5.32.1 Detailed Description

A subset of standard C library functions.

5.32.2 Function Documentation

5.32.2.1 atoi()

```
int atoi ( {\rm const\ char\ *\ s\ )}
```

Convert an ASCII string to an integer

Parameters

```
s A NUL-terminated string
```

Returns

The value of the string converted to an integer

5.33 stdlib.h

Go to the documentation of this file.

```
00001 #ifndef MPX_STDLIB_H

00002 #define MPX_STDLIB_H

00003

00014 int atoi(const char *s);

00015

00016 #endif
```

5.34 include/string.h File Reference

A subset of standard C library functions.

```
#include <stddef.h>
```

Include dependency graph for string.h: This graph shows which files directly or indirectly include this file:

Functions

```
- void * memcpy (void *restrict dst, const void *restrict src, size_t n)
```

- void * memset (void *address, int c, size_t n)
- int strcmp (const char *s1, const char *s2)
- int **strncmp** (const char *s1, const char *s2, unsigned int n)
- size_t strlen (const char *s)
- char * strtok (char *restrict s1, const char *restrict s2)

5.34.1 Detailed Description

A subset of standard C library functions.

5.34.2 Function Documentation

5.34.2.1 memcpy()

Copy a region of memory.

Parameters

dst	The destination memory region	
src	The source memory region	
n The number of bytes to copy		

Returns

A pointer to the destination memory region

5.34.2.2 memset()

Fill a region of memory.

Parameters

address	The start of the memory region	
С	The byte to fill memory with	
n	The number of bytes to fill	

Returns

A pointer to the filled memory region

5.34.2.3 strcmp()

```
int strcmp ( \label{eq:const_char} \mbox{const char} \ * \ s1, \\ \mbox{const char} \ * \ s2 \ )
```

Compares two strings

Parameters

s1	The first string to compare	
s2	The second string to compare	

Returns

0 if strings are equal, <0 if s1 is lexicographically before s2, >0 otherwise

5.34.2.4 strlen()

Returns the length of a string.

Parameters

```
s A NUL-terminated string
```

Returns

The number of bytes in the string (not counting NUL terminator)

5.34.2.5 strtok()

```
char * strtok (  {\it char * restrict } \ s1, \\ {\it const char * restrict } \ s2 \ ) \\
```

Split string into tokens TODO

5.35 string.h 29

5.35 string.h

Go to the documentation of this file.

```
00001 #ifndef MPX_STRING_H
00002 #define MPX_STRING_H
00003
00004 #include <stddef.h>
00005
00018 void* memcpy(void * restrict dst, const void * restrict src, size_t n);
00019
00027 void* memset(void *address, int c, size_t n);
00028
00035 int strcmp(const char *s1, const char *s2);
00036
00037 int strncmp(const char *s1, const char *s2, unsigned int n);
00038
00044 size_t strlen(const char *s);
00045
00050 char* strtok(char * restrict s1, const char * restrict s2);
00051
00052 #endif
```

5.36 include/sys_req.h File Reference

System request function and constants.

```
#include <mpx/device.h>
```

Include dependency graph for sys_req.h: This graph shows which files directly or indirectly include this file:

Macros

- #define INVALID OPERATION (-1)
- #define INVALID_BUFFER (-2)
- #define INVALID_COUNT (-3)

Enumerations

enum op_code { EXIT , IDLE , READ , WRITE }

Functions

• int sys_req (op_code op,...)

5.36.1 Detailed Description

System request function and constants.

5.36.2 Function Documentation

5.36.2.1 sys_req()

Request an MPX kernel operation.

Parameters

op_code	One of READ, WRITE, IDLE, or EXIT
	As required for READ or WRITE

Returns

Varies by operation

5.37 sys_req.h

Go to the documentation of this file.

```
00001 #ifndef MPX_SYS_REQ_H
00002 #define MPX_SYS_REQ_H
00003
00004 #include <mpx/device.h> 00005
00011 typedef enum {
00012
           EXIT,
00013
00014
           READ,

00019 #define INVALID_OPERATION
00020 #define INVALID_BUFFER
00021 #define INVALID_COUNT
00022
00029 int sys_req(op_code op, ...);
00030
00031 #endif
```

5.38 include/version.h File Reference

Displays the current version of MacaroniOS.

Macros

- #define GIT_DATE "unknown"
- #define GIT_HASH "unknown"
- #define GIT_DIRTY "unknown"

Functions

• void version_help (void)

Prints help information related to the version command.

void version_latest (void)

Displays the latest version.

void version_history (void)

Displays the past and present versions.

• void version_command (const char *args)

Main handler for the version command.

5.39 version.h 31

5.38.1 Detailed Description

Displays the current version of MacaroniOS.

5.38.2 Function Documentation

5.38.2.1 version_command()

Main handler for the version command.

Parameters

args The argument string passed after 'version'

5.39 version.h

Go to the documentation of this file.
